Strategic report for the year ended 31 December 2013

Principal activity

The principal activity of Prudential Retirement Income Limited (the Company) is the writing of pension annuity long term insurance business. This will continue in 2014.

Business review

The Company's conventional annuities include level, fixed increase and inflation linked annuities. The fixed increase annuities incorporate automatic increases in annuity payments by fixed amounts over the policyholder's life. The inflation linked annuities that the Company offers provide for a regular annuity payment which changes periodically based on the change in the UK inflation, which, for the majority of policies, is determined by reference to the Retail Price Index (RPI).

With effect from 31 December 2008, the Company entered into an arrangement with The Prudential Assurance Company Limited (PAC) to reinsure 15% of all its non-profit annuity business on a quota share basis. This arrangement allows for all of the reinsurance premiums to be deposited back to the Company. On a UK GAAP basis the reinsurance results in a loss of £28m (2012: loss of £76m) in the Company. There is an equal and offsetting profit in PAC from accepting this business.

The Company remained in a satisfactory financial position as at 31 December 2013.

Performance and measurement

The following table sets out the key performance indicators for the Company

Key Performance Indicators	2013 £m	2012 £m
Profit on ordinary activities before tax	293	458
Shareholder funds	2,847	2,591
Dividends paid	Nil	Nil

The profits during 2013 have mainly arisen from profits on new business written in the year and favourable mortality and credit experience over the year.

The assets and liabilities of the Company have reduced during 2013 both as a result of an increase in the yield on the underlying assets and the payment of annuities, partially offset by new business single premiums of £1.3bn (2012: £1.7bn).

Market review and strategy

During 2013, the Company has maintained its market leadership in annuities, where it has continued to obtain value from PAC's internal vesting pension book. This has been supported by the Company's partnership deals with insurers such as Royal London. The Company now has approximately 1,020,000 annuities in payment.

The Company's strategy in the wholesale market is to participate selectively in bulk annuity and back book buyouts, where the Company is able to win business based on its financial strength, superior track record as well as its extensive annuitant mortality risk assessment capabilities. The Company will maintain a strict focus on value, only participating in transactions that generate an acceptable rate of return.

Strategic report for the year ended 31 December 2013 (continued)

Market review and strategy (continued)

The Company along with the rest of the insurance industry, will work with the Government and regulators, following the 2013 Budget announcement, to ensure the new pensions system that emerges from the consultation period continues to serve the needs of British savers. The Company continues to believe in market-based solutions that give consumers choice and flexibility in the ways they save and draw down income in retirement. The Company has experience of working with many different structures to deliver positive outcomes for its customers. The Company welcomes the Government's commitment to close the savings and investment gap. The Company is well placed to continue to provide products that look after its customers' needs and in turn channel savings into long-term investment in the UK economy.

Risk & uncertainties

As a provider of insurance services, the Company's business is the managed acceptance of risk. The Company is a wholly owned subsidiary of the Prudential Group and is subject to the Group's internal control and risk management processes as detailed in the Group Governance Manual and Group Risk Framework. The control procedures and systems established within the Group are designed to manage, rather than eliminate, the risk of failure to meet business objectives. As such they provide strong but not absolute assurance against material misstatement or loss, and focus on optimising the levels of risk and reward with the aim of achieving the business objectives.

The Group's risk and governance framework requires all business units and functions within the Group, including the Company, to establish processes for identifying, evaluating and managing key risks. The risk management framework for the Company is approved by the Board and operates based on the concept of three lines of defence: risk management, risk oversight and independent assurance.

The Company's results and financial condition are exposed to both financial and non-financial risks. The key risk factors mentioned below should not be regarded as a complete and comprehensive statement of all potential risks and uncertainties. The Company's exposure to financial risk through its financial assets and liabilities is provided in detail in Note 9 of the notes to the financial statements.

Financial risks

The Company is exposed to financial risk through its financial assets, financial liabilities, and policyholder liabilities. The key financial risk factors affecting the Company are market risk, credit risk and insurance risk.

The current uncertainty in local and international economic and investment climates has increased financial risks and this could adversely affect the Company's business and profitability. Since 2008 the Company has had to operate against a challenging background of periods of unprecedented volatility in global capital and equity markets, interest rates, liquidity, and the broader economic environment. With historic low interest rates in the US, UK and the Eurozone and the unprecedented levels of quantitative easing in particular by the US, it remains to be seen how the markets and the economy as a whole adjusts as these actions are subsequently reversed.

The global financial markets have experienced and still continue to experience significant uncertainty brought on in particular by concerns over the US and European sovereign debts, as well as concerns about a general slowing of global demand reflecting an increasing lack of confidence among consumers, companies and governments, despite the actions that the central banks in the US, UK and Eurozone have taken. The demand for insurance products may also be adversely affected. If sustained, this environment is likely to have a negative impact on the insurance sector over time and may consequently have a negative impact on the Company's business and profitability. New challenges related to market fluctuations and general economic conditions may continue to emerge.

Strategic report for the year ended 31 December 2013 (continued)

Risk & uncertainties (continued)

(a) Market risk

Market risk is the risk of loss or adverse change in the financial condition of the Company resulting directly or indirectly from fluctuations in the level or volatility of market prices of assets and liabilities and changes in interest rates and exchange rates.

The current uncertainty in local and international economic and investment climates has increased market risk due to uncertainty in levels of asset returns, interest rates and inflation. The Company is exposed to market risk through its investments in property assets and mismatch between asset and liability interest rates and inflation exposures. The Company manages these risks by having limits in place for property investments and closely matching its asset and liability cashflows.

(b) Credit risk

Credit risk is the risk of loss to the Company resulting from fluctuations in the credit standing of issuers of securities, counterparties and debtors in the form of defaults, downgrades or widening of credit spreads.

The Company is exposed to significant levels of credit risk which arises mainly from the corporate bond holdings backing the annuity business. The global financial crisis has exacerbated credit risk as corporate borrowers are experiencing a challenging business environment and volatile profits and cash flows. This has impacted credit risk through the following:

- Increased risk of credit losses through defaults and widening of credit spreads on corporate bonds. This is a material risk for the Company, although less significant in 2013 than in previous years due to market improvements, and is managed by careful management of the corporate bond portfolio and having appropriate concentration and credit rating limits in place;
- The Company, in the normal course of business enters into a variety of transactions with counterparties, including cash deposit, reinsurance and derivative transactions. Failure of any of these counterparties to discharge their obligations or where adequate collateral is not in place (eg. in case of reinsurance counterparties), could have an adverse impact on the Company's results. The Company manages cash counterparty risk by using secured cash placements (such as reverse repos) and having counterparty concentration limits in place for unsecured cash deposits. Reinsurance counterparty risk is managed by diversifying reinsurance exposures across a number of counterparties and by having minimum counterparty credit rating limits and maximum concentration limits in place. Derivative counterparty risk is largely mitigated by careful counterparty selection and adequate collateralisation arrangements.

(c) Insurance risk

Insurance risk is the risk of loss or of adverse change in the value of insurance liabilities of the Company, resulting from changes in the level, trend or volatility of a number of insurance risk drivers. These include adverse longevity and expense experience.

The Company is exposed to significant levels of insurance risk. Insurance risk arises mainly in the form of longevity risk, which is the risk that the Company's (current and deferred) annuity customers live longer than allowed for in the Company's current pricing and reserving assumptions and as a result future reserving and capital assumptions are changed. The Company conducts rigorous research into longevity risk, using data from its annuitant portfolio. As part of its pension annuity pricing and reserving policy, the Company assumes that current rates of mortality continue to improve over time at levels based on the Company's calibration of the Continuous Mortality Investigations (CMI) 2012 mortality projection model as published by the Institute and Faculty of Actuaries.

Strategic report for the year ended 31 December 2013 (continued)

Risk & uncertainties (continued)

Financial risks (continued)

(c) Insurance risk (continued)

If mortality improvement rates significantly exceed the improvement assumed, the Company's operating results could be adversely affected. Also any major medical breakthrough (for example in the treatment of cancer or other life-threatening diseases) that would require the Company to strengthen its longevity assumptions will have an impact on the Company's results.

The Company is also exposed to expense risk which is the risk of actual expenses exceeding the assumptions in pricing and reserving bases. If the actual expenses exceed these assumptions, the Company's operating results could be adversely impacted.

In common with other industry participants, the profitability of the Company's businesses ultimately depends on a mix of factors including investment performance and asset impairments, longevity trends, unit cost of administration and new business acquisition expense.

(d) Liquidity risk

Liquidity risk is the risk that the Company, although solvent on a balance sheet basis, does not have sufficient cash resources available to meet its obligations as they fall due or can secure them only at excessive cost.

Liquidity risk is not a material risk for the Company. This risk is managed through careful management of bank balances, cash-flow forecasting, appropriate fund management (to ensure that assets are not unduly concentrated in less liquid investments) and detailed cash-flow matching for the annuity business.

Non-financial risk

The Company is exposed to business environment, strategic, operational and group risk.

(a) Business environment risk

Business environment risk is the risk that can arise as a result of changing external factors in the business environment and the impact on the fundamentals that drive the Company's overall strategy.

Strategic report for the year ended 31 December 2013 (continued)

Risk & uncertainties (continued)

Non-Financial risk (continued)

(a) Business environment risk (continued)

The material regulatory and legal change risks currently faced by the Company are:

- Solvency II The EU is harmonising the solvency framework for insurance companies across Europe based on the concept of three pillars — minimum capital requirements, supervisory review of firms' assessments of risk, and enhanced disclosure requirements. This will cover valuations, the treatment of insurance groups and companies, the definition of capital and the level of capital required. A key aspect of Solvency II is that the assessment of risks and capital requirements will be aligned more closely with economic capital methodologies, and may allow the Company to make use of its internal economic capital models, if approved by the relevant supervisory authority. Although the Solvency II Directive was formally approved by the Economic and Financial Affairs Council in November 2009 its implementation was delayed pending agreement on a directive known as Omnibus II which has now been agreed. This will amend certain aspects of the Solvency II Directive. In November 2013, representatives from the European Parliament, the European Commission and the Council of the European Union reached an agreement on the Omnibus II Directive, which has been adopted in early 2014. As a result, Solvency II is now expected to be implemented as of 1 January 2016, although the European Commission and the European Insurance and Occupational Pensions Authority (EIOPA) are continuing to develop the detailed rules that will complement the high-level principles of the Solvency II Directive, which is not currently expected to be finalised until mid-2015. There is significant uncertainty regarding the final outcome of this process. As a result there is a risk that the effect of the measures finally adopted could be adverse for the Company, including potentially a significant increase in capital required to support its business and that the Company may be placed at a competitive disadvantage to other European and non-European financial services groups.
- The split of regulation in the UK in 2013 between the Prudential Regulation Authority (PRA) and the Financial Conduct Authority (FCA) may give rise to new requirements and regulatory expectations of the Company. This may include an increase in thematic review activity, the impact of additional & conflicting compliance demands and the implications from the FCA's new powers and competition objective
- The new business implications resulting from the implementation of the Retail Distribution Review; requirements for compulsory Open Market Options being provided for vesting pension business (providing Open Market Options has been optional for some time but this has had a limited impact on customers switching); and Auto Enrolment / National Employment Savings Trust (NEST) where there is a potential impact on existing business due to amalgamation of deferred pots or automatic switching of funds to their new employers scheme, with NEST becoming the home for most small pension pots.
- Any further changes or modification to Financial Reporting Standards, or adoption of International Financial Reporting Standards (IFRS) may require a change in the reporting basis of future results, or a restatement of reported results.
- Changes in tax legislation could affect the Company's financial condition and results of operations.

Strategic report for the year ended 31 December 2013 (continued)

Risk & uncertainties (continued)

Non-Financial risk (continued)

(a) Business environment risk (continued)

- The annuities market in the UK is highly competitive, affecting the Company's ability to sell its products and its continued profitability. There are potential implications resulting from increased regulatory, media and political focus on annuities and retirement provision in general and the FCA's recently announced retirement income market study in particular. Regulatory changes such as Gender Neutral Pricing implemented in 2012, and the growth in more selective annuity providers focusing on impaired life annuities, may increase the Company's exposure to anti-selection risk in the future. These, in time, could potentially impact on sales volumes and margins.
- Given the outsourced nature of the Company's operating model, there is exposure to changes in the environment that affect the economics of these arrangements. Examples of this would include potential changes to VAT on outsourcing arrangements and medium term degradation of cost benefits arising from wage and cost inflation.

The uncertain economic environment and low interest rates may reduce consumer confidence and their propensity to buy retirement products. The customer demographics and the employment and retirement preferences are changing and this may lead to individuals deferring their retirement; that could alter the profile of pension maturities in the future, such that it does not materialise in line with the projections planned.

(b) Strategic risk

Strategic risk is the risk that can arise as a result of ineffective or inadequate business strategy decisions in relation to competitors, the market and consumers.

The strategic importance of annuity products means the Company is dependent on being able to continue to deliver profitable volumes from these lines of business and that unplanned regulatory or legal changes do not adversely impact customer or advisor behaviour for this business. The concentration leaves the UK business at risk to a significant change in its business model arising from future regulatory developments.

The Company operates a largely outsourced operating model, with heavy dependence on both internal and external organisations. This places strategic reliance on the performance of these organisations.

(c) Operational risk

Operational risk is the risk of loss arising from inadequate or failed internal processes, or from personnel and systems, or from external events.

The Company is exposed to operational risk in the ordinary course of its business and as a result may be subject to unplanned costs, regulatory fines or legal actions and disputes.

The Company operates in a mature and highly regulated environment where the pace of regulatory change has intensified making regulatory compliance a key risk. In addition to the level of change experienced, regulatory relationships have become more intrusive particularly around product development, distribution processes, complaint handling and breach management. There has been an increase in fines and regulatory sanctions imposed on firms.

Strategic report for the year ended 31 December 2013 (continued)

Risk & uncertainties (continued)

Non-Financial risk (continued)

(c) Operational risk (continued)

The Company's activities involve processing annuities in payment and as a result it is exposed to the risks of data integrity and transaction processing errors. Further, because of the nature of much of the Company's business, accurate records have to be maintained for significant periods. The Company is therefore exposed to data security risk potentially resulting in regulatory breaches, complaints and brand damage.

The Company outsources several inter-company and intra-group operations, including investment management, customer-facing functions, support and IT activities. The Company is therefore reliant upon the operational processing performance of its outsourcing partners, and their performance is monitored carefully.

The Company's systems and processes incorporate controls which are designed to manage the operational risks associated with its activities as any weakness in the administration systems, finance systems and processes or actuarial reserving process could have an impact on its results during the effected period.

As with any large organisation, the Company is affected by the risk of operational failures due to inadequate practices for the recruitment, development, management or retention of employees and contractors.

(d) Group risk

Group risk is the risk associated with being part of a group, particularly as a result of contagion.

Being a member of a group can provide significant advantages for the Company in terms of diversification of risk, financial strength, technical expertise and management experience. It can also give rise to risks; if a guarantee of financial support given by the parent were removed, or from particular transactions arising from an impaired parent or affiliate within the group. The independent capitalisation of the Company as well as the risk management processes and internal control mechanisms within the Company ensure group risk is appropriately managed.

Solvency II and other global regulatory developments

The European Union (EU) is developing a new prudential regulatory framework for insurance companies, referred to as 'Solvency II'. The Solvency II Directive, which sets out the new framework, was formally approved by the Economic and Financial Affairs Council in November 2009 although its implementation was delayed pending agreement on a directive known as Omnibus II which has been adopted and will amend certain aspects of the Solvency II Directive. The new approach is based on the concept of three pillars – minimum capital requirements, supervisory review of firms' assessments of risk, and enhanced disclosure requirements.

Specifically, Pillar 1 covers the quantitative requirements around own funds, valuation rules for assets and liabilities and capital requirements. Pillar 2 provides the qualitative requirements for risk management, governance and controls, including the requirement for insurers to conduct an Own Risk and Solvency Assessment the results of which will be reported to the supervisory authorities. Pillar 3 deals with the enhanced requirements for supervisory reporting and public disclosure.

Strategic report for the year ended 31 December 2013 (continued)

Solvency II and other global regulatory developments (continued)

A key aspect of Solvency II is that the assessment of risks and capital requirements are intended to be aligned more closely with economic capital methodologies and may allow Prudential to make use of its internal economic capital models if approved by the PRA.

In November 2013, representatives from the European Parliament, the European Commission and the Council of the European Union reached an agreement on the Omnibus II Directive, which has been adopted in early 2014. As a result, Solvency II is now expected to be implemented as of 1 January 2016, although the European Commission and the European Insurance and Occupational Pensions Authority (EIOPA) are continuing to develop the detailed rules that will complement the high-level principles of the Solvency II Directive, which is not currently expected to be finalised until mid-2015.

There is significant uncertainty regarding the final outcome from this process. In particular, certain detailed aspects of the Solvency II rules relating to the determination of the liability discount rate for UK annuity business remains to be clarified and the capital position of the Group, of which the Company is a part, is sensitive to these outcomes. Further, the effective application of a number of key measures incorporated in the Omnibus II Directive, including the provisions for third-country equivalence, are expected to be subject to supervisory judgement and approval. There is a risk that the effect of the measures finally adopted could be adverse for the Group and the Company, including potentially a significant increase in the capital required to support its business and that the Group and the Company may be placed at a competitive disadvantage to other European and non-European financial services groups. The Group is actively participating in shaping the outcome through its involvement in industry bodies and trade associations, including the Chief Risk Officer and Chief Financial Officer Forums, together with the Association of British Insurers and Insurance Europe.

Having assessed the requirements of Solvency II, an implementation programme was initiated with dedicated teams to manage the required work across the Group. The activity of the local Solvency II teams is coordinated centrally to achieve consistency in the understanding and application of the requirements. The Group is continuing its preparations to adopt the regime when it comes into force on 1 January 2016 and is undertaking in parallel an evaluation of the possible actions to mitigate its effects. Prudential regularly reviews its range of options to maximise the strategic flexibility of the Group. This includes consideration of optimising the Group's domicile as a possible response to an adverse outcome on Solvency II.

Over the coming months the Group will remain in regular contact with the PRA as it continues to engage in the 'pre-application' stage of the approval process for the internal model. In addition, the Group is engaged in the PRA's 'Individual Capital Adequacy Standards Plus (ICAS+)' regime, which is enabling its UK insurance entities to leverage the developments made in relation to the Solvency II internal model for the purpose of meeting the existing ICAS regime.

Currently there are also a number of other global regulatory developments which could impact the way in which the Group and the Company are supervised. These include the work of the Financial Stability Board on Global Systemically Important Insurers (G-SIIs) and the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) being developed by the International Association of Insurance Supervisors (IAIS).

Strategic report for the year ended 31 December 2013 (continued)

Solvency II and other global regulatory developments (continued)

In July 2013 the Financial Stability Board announced the initial list of nine insurance groups that have been designated as G-SIIs. This list included Prudential as well as a number of its competitors. The designation as a G-SII is likely to lead to additional policy measures being applied to the designated group. Based on a policy framework released by the IAIS concurrently with the initial list, these additional policy measures will include enhanced group-wide supervision. These additional measures will be phased in over a period from 2014 to 2019.

ComFrame is also being developed by the IAIS to provide common global requirements for the supervision of insurance groups. The framework is designed to develop common principles for supervision and so may increase the focus of regulators in some jurisdictions. It is also currently expected that some prescriptive requirements, including group capital requirements will be included in the framework. A revised draft ComFrame proposal was released for consultation in October 2013. The IAIS will undertake a field testing exercise from 2014-2018 to assess the impacts of the quantitative and qualitative requirements proposed under ComFrame. ComFrame is expected to be implemented in 2019.

On behalf of the Board of directors

S D Windridge

Prudential Group Secretarial Services Limited

Company Secretary

25 March 2014

Directors' report for the year ended 31 December 2013

Introduction

None of the information required to be included in the Directors' Report under Schedule 7 of the Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008 (as amended by The Companies Act 2006 (Strategic Report and Directors' Report) Regulations 2013) has been set out in the Company's Strategic Report.

Company Registration Number

The Company Registration number is SC047842.

Corporate responsibility

The Company is a wholly owned subsidiary within the Prudential Group and Corporate Responsibility (CR) is integral to the way the Group does business.

The Group, of which the Company is a part, has developed a Group Governance Framework which is underpinned by a Group Governance Manual and associated processes. This encompasses all key policies and procedures for example, the Group Code of Business Conduct.

As a business that provides savings, income, investment and protection products and services social value is created through the day-to-day operations. The Group provides customers with ways to help manage uncertainty and build a more secure future. In seeking to match the long-term liabilities the Group has towards its customers with similarly long-term financial assets, it provides capital that finances businesses, builds infrastructure and fosters growth in both developed and developing markets.

The Group's sustainable approach to business is reinforced by the Group-wide CR strategy. While the Group believes that CR is best managed on the ground by those closest to the customer and local stakeholders, the Group approach is underpinned by four global CR themes:

- Serving its customers: The Group aims to provide fair and transparent products that meets the customers' needs
- Valuing its people: The Group aspires to retain and develop highly engaged employees
- Supporting local communities: The Group seeks to make a positive contribution to its communities through long-term partnerships with charitable organisations that make a real difference
- Protecting the environment: The Group takes responsibility for the environment in which it operates

These themes provide clarity to the businesses as to how they should focus their CR efforts and resources in the context of their individual markets.

The Prudential plc Board discusses the Group's performance in the areas of social and environmental management at least once a year and also reviews and approves the Group's corporate responsibility report and strategy on an annual basis.

Post balance sheet events

There have been no significant events affecting the Company since the balance sheet date.

Directors' report for the year ended 31 December 2013 (continued)

Results and dividends

The state of affairs of the Company at 31 December 2013 is shown in the balance sheet on pages 19 and 20. The profit and loss account appears on pages 17 and 18. No dividend for 2013 is proposed (2012: £Nil).

Share Capital

No ordinary shares were issued by the Company during the year (2012: Nil). There have been no other changes in the Company's share capital during 2013 (2012: Nil).

Directors

The present directors are shown on page 2. Messrs Devey, Crossley and O'Dwyer resigned on 5 September, 6 June and 24 May 2013 respectively. Mr Hussain was appointed on 17 June 2013, Mr Warburton on 2 August 2013, and Ms Hunt on 1 October 2013. There have been no further changes.

Disclosure of information to auditors

The directors who held office at the date of approval of this directors' report confirm that, so far as they are each aware, there is no relevant audit information of which the Company's auditor is unaware; and each director has taken all the steps that they ought to have taken as a director to make themselves aware of any relevant audit information and to establish that the Company's auditor is aware of that information. This confirmation is given and should be interpreted in accordance with the provisions of section 418 of the Companies Act 2006.

Auditor

In accordance with Section 487(2) of the Companies Act 2006, KPMG Audit Plc will be deemed to be re-appointed auditor of the Company for the current financial year.

Directors' and officers' protection

Prudential plc has arranged appropriate insurance cover in respect of legal action against directors and senior managers of companies within the Prudential Group. In addition, the Articles of Association of the Company permit the directors, officers and employees of the Company to be indemnified in respect of liabilities incurred as a result of their office. Prudential plc also provides protections for directors and senior managers of companies within the Group against personal financial exposure they may incur in their capacity as such. These include qualifying third party indemnity provisions (as defined by the relevant Companies Act) for the benefit of directors of Prudential plc, including, where applicable, in their capacity as a director of the Company and other companies within the Group. These indemnities were in force during 2013 and remain in force.

On behalf of the Board of directors.

S D Windridge

Prudential Group Secretarial Services Limited

Company Secretary 25 March 2014

Statement of directors' responsibilities in respect of the Strategic report, Directors' report and the financial statements

The directors are responsible for preparing the Strategic Report and Directors' Report and the financial statements in accordance with applicable law and regulations.

Company law requires the directors to prepare financial statements for each financial year. Under that law they have elected to prepare the financial statements in accordance with UK Accounting Standards and applicable law (UK Generally Accepted Accounting Practice).

Under company law the directors must not approve the financial statements unless they are satisfied that they give a true and fair view of the state of affairs of the Company and of the profit or loss of the Company for that period.

In preparing these financial statements, the directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgments and estimates that are reasonable and prudent;
- state whether applicable UK Accounting Standards have been followed, subject to any material departures disclosed and explained in the financial statements; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the Company will continue in business

The directors are responsible for keeping adequate accounting records that are sufficient to show and explain the Company's transactions and disclose with reasonable accuracy at any time the financial position of the Company and enable them to ensure that its financial statements comply with the Companies Act 2006. They have general responsibility for taking such steps as are reasonably open to them to safeguard the assets of the Company and to prevent and detect fraud and other irregularities.

The directors are responsible for the maintenance and integrity of the corporate and financial information included on the Company's website. Legislation in the UK governing the preparation and dissemination of financial statements may differ from legislation in other jurisdictions.

H A Hussain Director

25 March 2014

Independent Auditor's report to the members of Prudential Retirement Income Limited

We have audited the financial statements of Prudential Retirement Income Limited for the year ended 31 December 2013 set out on pages 17 to 50. The financial reporting framework that has been applied in their preparation is applicable law and UK Accounting Standards (UK Generally Accepted Accounting Practice).

This report is made solely to the Company's members, as a body, in accordance with Chapter 3 of Part 16 of the Companies Act 2006. Our audit work has been undertaken so that we might state to the Company's members those matters we are required to state to them in an auditors' report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Company and the Company's members, as a body, for our audit work, for this report, or for the opinions we have formed.

Respective responsibilities of directors and auditors

As explained more fully in the Directors' Responsibilities Statement set out on page 14, the directors are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view. Our responsibility is to audit, and express an opinion on, the financial statements in accordance with applicable law and International Standards on Auditing (UK and Ireland).

Those standards require us to comply with the Auditing Practices Board's (APB's) Ethical Standards for Auditors.

Scope of the audit of the financial statements

A description of the scope of an audit of financial statements is provided on the Financial Reporting Council's web-site at www.frc.org.uk/auditscopeukprivate

Opinion on financial statements

In our opinion the financial statements:

- give a true and fair view of the state of the Company's affairs as at 31 December 2013 and of its profit for the year then ended;
- have been properly prepared in accordance with UK Generally Accepted Accounting Practice; and
- have been prepared in accordance with the requirements of the Companies Act 2006.

Opinion on other matters prescribed by the Companies Act 2006

In our opinion the information given in the Strategic Report and Directors' Report for the financial year for which the financial statements are prepared is consistent with the financial statements.

Independent Auditor's report to the members of Prudential Retirement Income Limited (continued)

Matters on which we are required to report by exception

We have nothing to report in respect of the following matters where the Companies Act 2006 requires us to report to you if, in our opinion:

- adequate accounting records have not been kept, or returns adequate for our audit have not been received from branches not visited by us; or
- the financial statements are not in agreement with the accounting records and returns; or
- · certain disclosures of directors' remuneration specified by law are not made; or
- we have not received all the information and explanations we require for our audit.

The financial statements on pages 17 to 50 were approved by the board of directors on 25 March 2014.

H A Hussain Director

Notes to the financial statements for the year ended 31 December 2013

1. Accounting Policies

(a) Changes to accounting policies

In 2013 there have been no changes to accounting policies arising from changes to, or new Financial Reporting Standards.

(b) Basis of preparation

The financial statements have been prepared in accordance with Part 15 of the Companies Act 2006 and Schedule 3 of the Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008.

The financial statements comply with applicable accounting standards and the 2005 ABI SORP, updated on 21 December 2006, and have been prepared under the historical cost accounting rules, modified to include the revaluation of investments.

The Company has not presented a capital position statement with supporting disclosures under FRS 27 on the basis that the Company is more than 90 per cent owned within a group and the Company is included in the publicly available Prudential Group financial statements which provide information on a group basis complying with this requirement. The process for setting assumptions and determining liabilities, as required to be disclosed by FRS 27, is described in Note 14 of the financial statements (together with key assumptions).

The directors have a reasonable expectation that the Company will be able to continue in operational existence for the foreseeable future and thus continue to adopt the going concern basis of accounting in preparing the financial statements.

This conclusion has been based upon the following: the Company is a subsidiary within the Prudential Group and it, its parent company and the ultimate parent company are continuing to trade profitably and there are no plans for liquidation, the Company has a healthy solvency margin, well in excess of the Minimum Capital Requirement (MCR) and Enhanced Capital Requirement (ECR) (Note 11), generates positive cashflows and has very low debt-financing. In addition consideration has also been given to the Company's performance, the market in which it operates, its strategy and risks and uncertainties, as set out in the Business Review on page 3, the management of financial risk as set out in Note 9, including its exposure to liquidity risk and credit risk.

(c) Long term business

Under FRS 26, the measurement basis of assets and liabilities of long term business contracts is dependent upon the classification of the contracts as either insurance contracts, if the level of insurance risk is significant, or investment contracts if the risk is insignificant. The Company's contracts are all classed as insurance contracts.

Annuity considerations are accounted for when due. Annuities are accounted for when the annuity becomes due for payment. Surrenders are accounted for when paid. Death claims and all other claims are accounted for when notified. Index linked business has been disclosed as linked for the purposes of these financial statements. Investment income and realised and unrealised investment gains attributable to long term business are credited to the long term business technical account.

The costs of acquiring new business, principally commission and certain costs associated with policy issue and underwriting, which are not matched by policy charges, are written off in the year in which they are incurred.

Notes to the financial statements for the year ended 31 December 2013 (continued)

1. Accounting Policies (continued)

(d) Investments

(i) Land and Buildings

Land and buildings are valued annually by a number of different professional external valuers on a Market Value basis, as defined in the Appraisal and Valuation Manual issued by the Royal Institute of Chartered Surveyors, in particular Practice Statement 3.2. No depreciation is provided on land and buildings held for investment purposes, in accordance with Statement of Standard Accounting Practice 19, Accounting for Investment Properties.

On a historical cost basis buildings are depreciated over 40 years. Leasehold buildings are depreciated over 40 years or if the lease is less than 40 years over the length of the lease.

(ii) Realised gains and losses on investments

Realised gains and losses on investments represent the difference between net proceeds on disposal and the purchase price.

(iii) Unrealised gains and losses on investments

Unrealised gains and losses on investments represent the difference between the change in the value of investments held at the balance sheet date and the reversal of unrealised investment gains and losses recognised in earlier accounting periods in respect of investment disposals.

Under FRS 26 upon initial recognition, financial investments are measured at fair value. Subsequently, the Company is permitted, subject to specific criteria, to designate its investments as either financial investments at fair value through profit and loss, financial investments held on an available-for-sale basis, financial investments held to maturity, or loans and receivables. The Company holds financial investments on the following bases:

(iv) Financial investments at fair value through profit and loss

This comprises assets designated by management as fair value through profit and loss on inception and derivatives which are deemed to be held for trading. These investments are valued at fair value with all changes thereon being recognised in the profit and loss account.

The Company uses bid prices to value its quoted financial investments. Actively traded investments without quoted prices are valued using external broker bid prices. If there is no active established market for an investment, the Company applies an appropriate valuation technique such as discounted cash flow technique. Further information on valuation techniques is provided in Note 9 on pages 30 to 32.

(v) Loans and receivables

This comprises investments that have fixed or determinable payments and are not designated as fair value through profit and loss or available-for-sale. These investments include loans secured by mortgages, deposits and other unsecured loans and receivables. These investments are carried at amortised cost using the effective interest method and subject to impairment reviews. The Company measures the amount of the impairment loss by comparing the amortised cost with the present value of its estimated future cash flows discounted at the original effective interest rate.

Notes to the financial statements for the year ended 31 December 2013 (continued)

1. Accounting Policies (continued)

(e) Long term business provision

The long term business provision is determined by the Company's directors based on advice from the Company's Actuarial Function Holder, who determined the provision using recognised actuarial methods, with due regard to the actuarial principles laid down in Directive 2002/83/EC.

It is calculated initially on a statutory solvency basis to comply with the reporting requirements under the Financial Services and Markets Act 2000. The valuation is then modified to remove certain resilience, contingency and other reserves required by the Prudential Sourcebook for Insurers and the General Prudential Sourcebook issued by the Prudential Regulation Authority.

The technical provisions are the discounted value of future claim payments, adjusted for investment expenses and future administration costs. Claim payments allow for the effects of mortality in line with the bases set out in Note 14. These bases have been derived from an analysis of recent population and internal mortality experience and make allowance for improvements in mortality in the future. The assumptions also seek to take into account the impact of anti-selection.

The interest rates used for discounting claim payments are derived from the yield on the assets held and make allowance for potential defaults on those assets (see Note 14). Long-term rates of default appropriate to the assets held have been set based on an investigation into historic rates of default by credit rating, term to redemption and security. An additional short-term default provision is held to reflect market conditions at the valuation date.

(f) Cash Flow Statement

The Company has availed itself of the exemption from preparing a cash flow statement allowed under section 5(a) of FRS 1, "Cash Flow Statements", on the grounds that it is a wholly owned subsidiary of Prudential plc which publishes a consolidated cash flow statement incorporating the cash flows of the Company.

(g) Taxation

Tax is charged on all taxable profits arising in the accounting period.

The UK Government has made substantial changes to the rules relating to the taxation of life insurance companies, effective from 1 January 2013. Until the end of 2012, shareholders' taxable profits are calculated using regulatory surplus as a starting point, with appropriate deferred tax adjustments for UK GAAP. Beginning in 2013, under new life tax rules, taxable profits are calculated using accounting profit or loss as a starting point.

Except where otherwise required by accounting standards, full provision for deferred tax without discounting is made for all timing differences which have arisen but not reversed at the balance sheet date.

(h) Foreign Currencies

Foreign currency revenue transactions are translated at the rate applied at the time of execution. Monetary foreign currency assets and liabilities are translated at year end exchange rates. Exchange differences are included in the profit and loss account.

Notes to the financial statements for the year ended 31 December 2013 (continued)

1. Accounting Policies (continued)

(i) Reinsurance

In the normal course of business the Company seeks to reduce loss exposure by reinsuring certain levels of risk in various areas of exposure with other insurance companies or reinsurers. An asset or liability is recognised in the balance sheet representing premiums due to or payments due from reinsurers and the share of benefits and claims recoverable from reinsurers. The measurement of reinsurance assets is consistent with the measurement of the underlying direct insurance contracts.

2. Segmental analysis

(a) Gross premiums written

	2013 £m	2012 £m
Pension annuities:		
Level and fixed increasingIndex linked	1,200 122	1,544 140
	1,322_	1,684
Comprising:		
External direct premiums:		
- Immediate annuities	437	592
- Deferred annuities	1	(3)
	438	589
External reinsurance accepted:		
- Immediate annuities	132	148
Reinsurance from a related party:		
- Immediate annuities	752	947
Total	1,322	1,684

All premiums are single premium business. All business is written in the United Kingdom. Group pension schemes included in premiums are £274m (2012: £409m).

(b) Assets attributable to the long term business fund

Of the total assets shown on page 19, £29,582m (2012: £29,938m) is attributable to the long term business fund.

Notes to the financial statements for the year ended 31 December 2013 (continued)

3. Investment income

		m business il account		echnical ount

5. Tax on profit on ordinary activities (continued)

(b) Factors affecting tax charge for the period

	2013 £m	2012 £m
Profit on ordinary activities before tax	293	458
Profit on ordinary activities multiplied by effective rate of corporation tax in the UK of 23.25% (2012: 24.5%)	68	112
Effects of		
Timing differences		
- Effect of life tax transitional adjustment	29	(40)
Current tax charge for the period	97	72

6. Auditors' remuneration

Fees payable to KPMG Audit Plc (KPMG) for the audit of the Company's accounts and the Company's reporting pack for the Parent's consolidated accounts were £70,000 (2012: £70,000). Fees payable to KPMG for other services pursuant to legislation, including the audit of the regulatory return were £30,000 (2012: £30,000).

7. Directors' emoluments

During the year, the directors received the following emoluments in respect of work on behalf of the Company.

	2013 £	2012 £
Aggregate emoluments and non-pension benefits	408,024	414,346

During the year seven (2012: four) directors were entitled to shares under the Prudential's main long term incentive scheme. One director is entitled to retirement benefits under the defined benefit scheme and three directors participate in the defined contribution scheme.

The aggregate of emoluments and amounts receivable under long term incentive schemes of the highest paid director included in the above figure was £115,931 (2012: £188,555). During the year the highest paid director did not exercise any share options but did receive shares under a long term incentive scheme.

8. Acquisition costs

Included within the total for acquisition costs are commissions of £13m (2012: £17m).

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments

	C	Cost		nt Value
	2013 £m	2012 £m	2013 £m	2012 £m
Freehold land and buildings	461	461	497	487
Leasehold land and buildings	309	314	358	349
Derivative assets	29	23	199	270
Equity securities	10	12	1	2
Debt securities and other fixed income securities	18,449	17,757	19,923	20,247
Loans secured by mortgages	182	150	182	150
Other loans	3	3	3	3
Deposits with credit institutions	827	600	827	600
	20,270	19,320	21,990	22,108

The change in current value of investments included in the profit and loss account was a loss of £1,026m (2012: gain of £1,091m) analysed between a loss of £990m (2012: gain of £1,136m) included in the Long term business technical account and a loss of £36m (2012: loss of £45m) included in the Nontechnical account. The change in current value of £990m (2012: gain of £1,136m) included a gain of £16m (2012: loss of £6m) in respect of land and buildings, a loss of £944m (2012: gain of £1,081m) in respect of debt securities, no change in respect to equity securities (2012: gain of £2m) and a loss of £62m (2012: gain of £59m) in respect of derivatives.

Amounts included in the above ascribed to listed investments:

	Current Value		
	2013 £m	2012 £m	
Equity securities	1	2	
Debt securities and other fixed income securities	18,523	19,133	
	18,524	19,135	

All leasehold land and buildings are classed as long lease as their term is greater than 50 years.

If the revalued land and buildings were stated on the historical cost basis, the amounts would be:

	Freehold and leasehold land and buildings		
	2013 £m	2012 £m	
At cost	770	775	
Aggregated depreciation	(106)	(96)	
Net book value based on historical cost	664	679	

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments (continued)

(a) Financial instruments

(i) Designation and fair values

All financial assets of the Company are designated as either fair value through profit and loss or loans and receivables. Financial liabilities are designated as either fair value through profit and loss or amortised cost.

	256	4,328	4,584	4,584

As at 31 December 2013 no convertible bonds (2012: £Nil) were included in debt securities. There were no convertible bonds included in borrowings (2012: £Nil).

For financial liabilities designated as fair value through profit and loss there was no material impact on profit from movements in credit risk during 2013 and 2012.

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments (continued)

(a) Financial instruments (continued)

(ii) Determination of fair values

The fair values of the financial assets and liabilities as shown in the table above and on the previous page have been determined on the following bases.

The fair values of the financial instruments for which fair valuation is required under UK GAAP are determined by the use of current market bid prices for quoted investments, or by using quotations from independent third-parties, such as brokers and pricing services or by using appropriate valuation techniques. Investments valued using valuation techniques include financial investments which by their nature do not have an externally quoted price based on regular trades and financial investments for which markets are no longer active as a result of market conditions e.g. market illiquidity. The valuation techniques used include comparison to recent arm's length transactions, reference to other instruments that are substantially the same, discounted cash flow analysis, option adjusted spread models and, if applicable, enterprise valuation. These techniques may include a number of assumptions relating to variables such as credit risk and interest rates. Changes in assumptions relating to these variables could positively or negatively impact the reported fair value of these instruments. When determining the inputs into the valuation techniques used priority is given to publicly available prices from independent sources, when available but overall, the source of pricing is chosen with the objective of arriving at a fair value measurement which reflects the price at which an orderly transaction would take place between market participants on the measurement date.

The fair value estimates are made at a specific point in time, based upon available market information and judgements about the financial instruments, including estimates of the timing and amount of expected future cash flows and the credit standing of counterparties. Such estimates do not reflect any premium or discount that could result from offering for sale at one time the Company's entire holdings of a particular financial instrument, nor do they consider the tax impact of the realisation of unrealised gains or losses from selling the financial instrument being fair valued. In some cases the fair value estimates cannot be substantiated by comparison to independent markets, nor can the disclosed value be realised in immediate settlement of the financial instrument.

The loans and receivables have been shown net of provisions for impairment where applicable. The fair value of loans has been estimated from discounted cash flows expected to be received. The rate of discount used was the market rate of interest.

The estimated fair value of derivative instruments reflects the estimated amount the Company would receive or pay in an arm's length transaction. The amount is determined using quoted prices if exchange listed, quotations from independent third parties or valued internally using standard market practices.

The fair value of borrowings is based on quoted market prices, where available.

The fair value of other financial liabilities of the Company is determined using discounted cash flows of the amounts expected to be paid.

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments (continued)

(a) Financial instruments (continued)

(iii) Level 1, 2 and 3 fair value measurement hierarchy of financial instruments

The classification criteria and its application to the Company can be summarised as follows:

Level I – quoted prices (unadjusted) in active markets for identical assets and liabilities

Level 1 principally includes exchange listed equities, mutual funds with quoted prices, exchange traded derivatives such as futures and options, and national government bonds unless there is evidence that trading in a given instrument is so infrequent that the market could not possibly be considered active. It also includes other financial instruments where there is clear evidence that the year end valuation is based on a traded price in an active market.

Level 2 – inputs other than quoted prices included within level 1 that are observable either directly (i.e. as prices) or indirectly (i.e. derived from prices)

Level 2 principally includes corporate bonds and other non-national government debt securities which are valued using observable inputs, together with over-the-counter derivatives such as forward exchange contracts and non-quoted investment funds valued with observable inputs. It also includes investment contract liabilities that are valued using observable inputs.

The nature of the Company's operations in the UK mean that a significant proportion of the assets backing non-linked shareholder backed business are held in corporate bonds, structured securities and other non-national government debt securities. These assets, in line with market practice, are generally valued using third party broker quotes in the UK either directly or via third parties such as IDC or Bloomberg. Such assets have generally been classified as level 2 as the nature of broker quotations means that it does not strictly meet the definition of a level 1 asset. However these valuations are determined using independent external quotations from multiple sources and are subject to a number of monitoring controls such as monthly price variances, stale price reviews and variance analysis on prices achieved on subsequent trades.

In addition level 2 includes debt securities that are valued internally using standard market practices. Of the total level 2 debt securities of £17,191m (2012: £17,610m), £1,415m (2012: £1,021m) are valued internally. The majority of such securities use matrix pricing, which is based on assessing the credit quality of the underlying borrower to derive a suitable discount rate relative to government securities. Under matrix pricing, the debt securities are priced taking the credit spreads on comparable quoted public debt securities and applying these to the equivalent debt instruments factoring a specified liquidity premium. The significance of the parameters used in this valuation technique are readily observable in the market and, therefore, are not subject to interpretation.

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments (continued)

(a) Financial instruments (continued)

(iii) Level 1, 2 and 3 fair value measurement hierarchy of financial instruments (continued)

Level 3: Significant inputs for the asset or liability that are not based on observable market data (unobservable inputs)

Level 3 principally includes investments in private equity funds, investments in property funds which are exposed to bespoke properties or risks, investments which are internally valued or subject to a significant number of unobservable assumptions and certain derivatives which are bespoke or long dated. It also includes debt securities which are rarely traded or traded only in privately negotiated transactions and hence where it is difficult to assert that these have been based on observable market data. The inherent nature of the vast majority of these assets means that, in normal market conditions, there is unlikely to be significant change in the specific underlying assets classified as level 3.

Of the £60m (2012: £1m) level 3 items which support non-linked shareholder-backed business Nil% (2012: Nil%) of the total assets net of derivative liabilities backing this business are valued externally, all are internally valued. Internal valuations, which represent only 3% for levels 1 to 3 (2012: 2%) of the total assets net of derivative liabilities supporting non-linked shareholder-backed business, are inherently more subjective than external valuations.

If the value of all level 3 investments backing non-linked shareholder-backed business was varied by 10%, the change in valuation would be £1.6m (2012: £0.1m), which would reduce or increase shareholders' equity by this amount before tax.

2013	Level 1	Level 2	Level 3	Total		
	£m					
Equity securities		_	1	1		
Debt securities	2,673	17,191	59	19,923		
Other investments (including derivative assets)	· -	199	-	199		
Assets held to cover linked liabilities	813	2,864	-	3,677		
Derivative liabilities	**	(188)	-	(188)

Reconciliation of movements in level 3 financial instruments measured at fair value

The following table reconciles the value of level 3 financial instruments at 1 January 2013 to that presented at 31 December 2013. Total gains and losses recorded in the long-term technical account in the period represents realised gains and losses, including interest and dividend income, unrealised gains and losses on financial instruments classified at fair value through profit and loss and foreign exchange movements on overseas investments. All these amounts are included within "investment income" and "unrealised gains (losses)" in the long-term technical account.

2013	At 1 Jan 2013	Total gains in long-term technical account	Purchases	Sales		Transfers out of level 3	
				£m			
Equity securities	1	**	-	-	-	_	1
Debt securities	-	-	-	-	59		59
Total financial investments net of derivative							
liabilities	1		-	-	59	_	60

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments (continued)

(a) Financial instruments (continued)

(iii) Level 1, 2 and 3 fair value measurement hierarchy of financial instruments (continued)

2012	At 1 Jan 2012	Total gains in long-term technical account	Purchases	Sales	Transfers into level 3	Transfers out of level 3	
				£m			
Equity securities	1	_	-	••	-	les.	1
Debt securities	2	1	-	(3)		_	M
Total financial investments net of derivative							
liabilities	3	1		(3)	-		111

Of the total gain of £Nil (2012: £1m gain) in the period, £Nil (2012: £1m gain) gain relates to level 3 financial instruments not held at the end of the year, all of which relate to debt securities.

Transfers between level 1 and level 2

There have been no significant transfers between level 1 and level 2 during 2013 and 2012.

(iv) Interest income and expense

The interest income on financial assets not at fair value through profit and loss was £11m for the year ended 31 December 2013 (2012: £7m).

There is no interest expense on financial liabilities not at fair value through profit and loss for the year ended 31 December 2013 (2012: £Nil).

(b) Market risk

Market risk is the risk that the fair value or future cash flows of a financial instrument or, in the case of liabilities of insurance contracts, their carrying value will fluctuate because of changes in market prices.

Market risk comprises four types of risk, namely:

- Interest rate risk: due to changes in market interest rates,
- Liquidity risk: inability to meet payment of obligations in a timely manner at a reasonable cost or the risk of unexpected increases in the cost of funding the portfolio at appropriate maturities or rates
- Currency risk: due to changes in foreign exchange rates, and
- Other price risk: due to fluctuations in market prices (other than those arising from interest rate risk or currency risk).

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments (continued)

(b) Market Risk (continued)

The financial assets covering the Company's liabilities are subject to market risk. The liabilities for annuity contracts are subject to market risk arising from changes in the returns of the attaching assets. Except mainly to the extent of any minor asset/liability duration mismatch, and exposure to credit risk, the sensitivity of the Company's annuity business' results to market risk for movements in the carrying value of liabilities and covering assets is broadly neutral on a net basis.

The principal items affecting the results of the Company are mortality experience and assumptions and credit risk.

(i) Interest rate risk

The following table shows an analysis of the classes of financial assets and liabilities and their direct exposure to interest rate risk. Each applicable class of the Company's assets or liabilities are analysed between those exposed to fair value interest rate risk, cash flow interest rate risk and those with no direct interest rate risk exposure.

2013	Fair value interest rate risk	Cash flow interest rate risk	rest exposed to	
		£	m	
Financial Assets:				
Deposits with credit institutions	-	827	-	827
Equity securities	-	-	1	1

9. Investments (continued)

(b) Market Risk (continued)

(i) Interest rate risk (continued)

2012	Fair value interest rate risk	Cash flow interest rate risk	Not directly exposed to interest rate risk	Total
		£	m	
Financial Assets:				
Deposits with credit institutions	-	600	-	600
Equity securities	-	-	2	2
Debt securities	19,955	193	99	20,247
Loans:				
Loans secured by mortgages	150	-	_	150
Other loans	3	-	-	3
Derivative asset	248	-	22	270
Cash at bank and in hand	-	-	233	233
	20,356	793	356	21,505
	Fair value interest rate risk	Amortised cost	Not directly exposed to interest rate risk	Total
		£	m	
Financial Liabilities:				0.7.0
Derivative liabilities	256			256
	20,100	793	356	21,249

(ii) Maturity analysis of derivatives

The net derivative position as at the 31 December 2013 was an asset of £11m (2012: asset of £14m).

The net derivative positions as stated above comprise the following derivative assets and liabilities:

	2013 £m	2012 £m
Derivative assets	199	270
Derivative liabilities	(188)	(256)
Net Derivative position	11	14

The derivative assets and liabilities have been included at fair value and their maturity within 1 year or less which represents the basis on which they are managed (i.e. to manage principally asset or liability value exposures). Contractual maturities are not considered essential for an understanding of the timing of the cash flows for these instruments and in particular the Company has no cash flow hedges.

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments (continued)

(b) Market Risk (continued)

(iii) Sensitivity to interest rate movement

The close matching by the Company of assets of appropriate duration to its annuity liabilities is based on maintaining economic and regulatory capital. The measurement of liabilities under capital reporting requirements and UK GAAP is not the same, with contingency reserves and some other margins for prudence within the assumptions required under the PRA regulatory solvency basis not included for UK GAAP reporting purposes. As a result UK GAAP's shareholders' funds are higher than regulatory capital and therefore more sensitive to interest rate risk.

The estimated sensitivity of the shareholder-backed business to a movement in interest rates of 1% and 2% as at 31 December 2013 and 2012 are as follows:

2013

2013	Fall of 2%	Fall of 1% £m	Rise of 1%	Rise of 2%
Carrying value of debt securities and derivatives Long term business provision Related tax effects	7,608 (6,682) (185)	3,405 (2,986) (84)	(2,811) 2,446 73	(5,166) 4,473 139
Net sensitivity of profit after tax and shareholders' funds	741	335	(292)	(554)
2012	Fall of 2%	Fall of 1%	Rise of 1%	Rise of 2%
Carrying value of debt securities and derivatives Long term business provision Related tax effects	7,956 (7,012) (217)	3,536 (3,123) (95)	(2,895) 2,544 81	(5,306) 4,642 153
Net sensitivity of profit after tax and shareholders' funds	727	318	(270)	(511)

(iv) Currency risk

As at 31 December 2013, the Company held 4% (2012: 4%) and 67% (2012: 66%) of its financial assets and financial liabilities respectively, in currencies, mainly US dollar and Euro, other than the functional currency, Sterling.

The exchange risks inherent in these exposures are mitigated through the use of derivatives, mainly forward currency contracts.

(v) Other Price Risk - Equities and Property

In addition the shareholder backed portfolio of the Company includes equity securities and investment property. Excluding any second order effects on the measurement of the liabilities for future cash flow to the policy holder a fall in their value would have given rise to the following effects on pre-tax profit, profit after tax, and shareholder equity.

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments (continued)

(b) Market Risk (continued)

(v) Other Price Risk - Equities and Property (continued)

2013	A decrease of 20%	A decrease of 10%
	£m	
Pre-tax profit	(171)	(85)
Related current tax effects	34	17
Net sensitivity of profit after tax and		
shareholders' equity	(137)	(68)
2012	A decrease	A decrease
	of 20%	of 10%
	£m	
Pre-tax profit	(168)	(84)
Related current tax effects	39	19
Net sensitivity of profit after tax and		
shareholders' equity	(129)	(65)

A 10% or 20% increase in their value would have an approximately equal and opposite effect on profit and shareholders' equity to the sensitivities shown above.

In the equity and property risk sensitivity analysis shown above the Company has, for 2013, considered the impact of an instantaneous 20 per cent fall in equity and property markets. If equity and property markets were to fall by more than 20 per cent, the Company believes that this would not be an instantaneous fall but rather this would be expected to occur over a period of time during which the Company would be able to put in place mitigating management actions.

(c) Derivatives and Hedging

The Company uses various derivative arrangements in order to assist in the matching of contractual liabilities.

Currency swap agreements involve the exchange of payments in different currencies over the life of the agreement. The Company enters into currency swap transactions to hedge foreign currency risk on overseas investments. Interest rate and inflation swap agreements involve the exchange of fixed and floating payments over the life of the agreements without an exchange of the underlying principal amount. The Company has entered into credit default swap arrangements predominantly in respect of sovereign government debt obligations.

The swap agreements are accounted for on a market value basis, consistent with the assets and liabilities hedged. All over-the-counter derivative transactions are conducted under standardised ISDA (International Swaps and Derivatives Association Inc) master agreements and the Group has collateral agreements between the individual group entities, of which the Company is one, and relevant counterparties in place under each of these market master agreements.

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments (continued)

(d) Credit Risk

(i) Debt securities and other fixed income securities

The following table summarises by the rating, the securities held by the Company as at 31 December 2013 and 2012:

	Total	Total
	2013	2012
	£m	£m
S&P – AAA	2,527	2,605
S&P - AA + to AA -	2,843	2,741
S&P-A+ to $A-$	5,550	5,906
S&P – BBB+ to BBB-	3,527	3,734
S&P – Other	198	202
	14,645	15,188
Moody's – Aaa	392	1,908
Moody's -Aa1 to Aa3	1,537	589
Moody's -A1 to A3	829	190
Moody's - Baa1 to Baa3	281	321
Moody's - Other	4	30
·	3,043	3,038
Fitch	134	133
Other	2,101	1,888
Total debt securities	19,923	20,247

In the table above, S&P ratings have been used where available. For securities where S&P ratings are not immediately available, those produced by Moody's and then Fitch have been used as an alternative.

Where no external ratings are available, internal ratings produced by the Prudential Group's asset management operations, which are prepared on a comparable basis to external ratings, are used where possible. Of the total debt securities held at 31 December 2013 which are not externally rated, £1,297m (2012: £1,000m) were internally rated AAA to A-, £722m (2012: £783m) were internally rated BBB to B- and £82m (2012: £105m) were unrated.

In 2011, S&P withdrew its ratings of debt securities issued by a number of sovereigns. Where these are no longer available, Moody's ratings have been used.

The Company's exposure to the eurozone sovereigns of Portugal, Italy, Ireland, Greece and Spain (PIIGS) is £51m (2012: £49m). The Company's exposure to banking operations in these eurozone countries is £79m (2012: £78m). The Company has no exposure in Ireland or Greece (2012: £Nil).

(ii) Loans and receivables

Of the total loans and receivables held £1m (2012: £1m) are past their due date but have not been impaired. Of the total past due but not impaired, £1m (2012: £1m) are less than 1 year past their due date. The Company expects full recovery of these loans and receivables. In accordance with accounting policy, impairment reviews were performed for loans and receivables. During the year ended 31 December 2013, no impairment losses (2012: £Nil) were recognised for loans and receivables.

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments (continued)

(iii) Securities lending and reverse repurchase agreements

The Company has entered into securities lending (including repurchase agreements) whereby blocks of securities are loaned to third parties, primarily major brokerage firms. The amounts above the fair value of the loaned securities required to be held as collateral by agreements, depend on the quality of the collateral, calculated on a daily basis. The loaned securities are not removed from the Company's balance sheet, rather they are retained within the appropriate investment classification. Collateral, typically consists of cash, debt securities, equity securities and letters of credit. At 31 December 2013, the Company had lent £828m (2012: £847m) of securities and held collateral under such agreements of £858m (2012: £874m). Of this amount £167m (2012: £166m) related to another group company.

At 31 December 2013, the Company had entered into reverse repurchase transactions, under which it purchased securities and had taken on the obligation to resell the securities for the purchase price, amounting to £676m (2012: £304m), together with accrued interest. Of this amount £Nil (2012: £Nil) related to another group company.

These transactions are conducted under terms that are usual and customary to collateralised transactions including, where relevant, standard securities lending and repurchase agreement.

(iv) Collateral under derivative transactions

At 31 December 2013, the Company had lent £85m (2012: £96m pledged) for liabilities and held collateral of £335m (2012: £332m) in respect of over-the-counter derivative transactions.

(v) Reinsurer's share of technical provisions

Of the reinsurer's share of technical provisions at 31 December 2013 of £3,582m (2012: £3,596m), 2.0% (2012: 1.6%) of the balance relates to companies outside of the Prudential Group and of these 100% (2012: 100%) of the balance were from reinsurers with S&P's rating of AA- and above, based on the ratings at the date of signing these financial statements.

(e) Risk management

The Company's business involves the acceptance and management of risk. The Company has in place a risk management process, which is undertaken in accordance with the Group Risk Framework.

A number of risk factors affect the Company's operating results and financial condition. The financial risk factors affecting the Company include the effects of market risk, credit risk and liquidity risk on the financial instruments of the Company.

The Company uses derivatives to facilitate efficient portfolio management or to reduce investment risk. The most widely used derivatives by the Company are interest rate, currency and inflation-linked swaps.

The Company also uses over-the-counter swaps (including total return swaps), options, swaptions and warrants.

Derivative financial instruments used to facilitate efficient portfolio management and for investment purposes are carried at fair value with changes in fair value included in the profit and loss account. The Company has not applied hedge accounting to its derivatives except as described in note C above.

Notes to the financial statements for the year ended 31 December 2013 (continued)

9. Investments (continued)

(e) Risk management (continued)

Market risk

Market risk is the risk of loss for the Company, or of adverse change in the financial situation, resulting, directly or indirectly, from fluctuations in the level of volatility of market prices of assets and liabilities.

The primary market risk that the Company faces is interest rate risk because most of its assets are investments that are bonds, mortgages or cash deposits, the values of which are subject to interest rate risk. The Company has some liabilities that contain guaranteed returns which generally will be supported by fixed income investments.

Credit risk

Credit risk is the risk of loss for the Company or of adverse change in the financial position, resulting from fluctuations in the credit standing of issuers of securities, counterparties and any debtors in the form of default or other significant credit event (e.g. downgrade or spread widening). The Company's long term fund holds large amounts of investments that contain credit risk on which a certain level of defaults is expected. These expected losses are considered when the Company determines the crediting rates, deposit rates and premium rates for the products that will be supported by these assets. Certain over-the-counter derivatives contain a credit risk element that is controlled through evaluation of collateral agreements and master netting agreements on interest rate and currency swaps. The Company is also exposed to credit-related losses in the event of non-performance by counterparties.

Liquidity risk

Liquidity risk is the risk that the Company may be unable to meet the payment of obligations in a timely manner at a reasonable cost or the risk of unexpected increases in the cost of funding the portfolio at appropriate maturities or rates. The Company writes solely annuity business, which cannot be surrendered. Therefore liquidity risk is mitigated by cashflow matching the maturity profile of investments with the expected regular annuity payments.

10. Investments in group undertakings

	Cost		Current Value	
	2013 £m	2012 £m	2013 £m	2012 £m
Loans to group undertakings	1,307	1,272	1,307	1,272

In 2013 the Company entered into new loan agreements of £57m (2012: £118m) which represents loans to The Prudential Assurance Company Limited. Of the total loans, £57m (2012: £56m) is to be repaid within one year and the remainder of £1,250m (2012: £1,216m) have no set term.

11. Capital requirements and management

Regulatory capital requirements apply at both an individual Company level and at the Prudential Group level, of which the Company is a part, for life assurance and investment management business. The Prudential Group, of which the Company is a part, is currently subject to the solvency requirements of the Insurance Groups Directive (IGD) as implemented by the PRA. Under the IGD a continuous parent company solvency test is applied: under this test the surplus capital held in each of the regulated subsidiaries, including the Company, is aggregated with the free assets of non-regulated subsidiaries.

Notes to the financial statements for the year ended 31 December 2013 (continued)

11. Capital requirements and management (continued)

From this total, Prudential Group borrowings are deducted, other than subordinated debt issues which qualify as capital.

In addition to obligations under subsidiary and Prudential Group regulatory requirements, the Prudential Group applies an economic framework to its management of capital. Economic capital provides a realistic and consistent view of the Group's capital requirements, allowing for diversification benefits.

At the Company level, the PRA rules which govern the Prudential regulation of insurance form part of the Insurance Prudential Sourcebook, the General Prudential Sourcebook and Interim Prudential Sourcebook for Insurers. Overall, the net requirements of the General Prudential Sourcebook are intended to align the capital adequacy requirements for insurance business more closely with those of banking and investment firms and building societies, for example, by addressing tiers of capital, rather than looking at net admissible assets. An insurer must hold capital resources equal at least to the Minimum Capital Requirement (MCR).

The Insurance Prudential Sourcebook also contains rules on Individual Capital Assessments. Under these rules and the rules of the General Prudential Sourcebook all insurers must assess for themselves the amount of capital needed to back their business. If the PRA views the results of this assessment as insufficient, it may draw up its own Individual Capital Guidance for a firm, which can be superimposed as a requirement.

The available capital of £2,143m (2012: £1,937m) reflects the excess of regulatory basis assets over liabilities of the fund, before deduction of the capital resources requirement of £851m (2012: £866m).

The capital resources requirement for this Company broadly reflects a formula which, for active funds, equates to a percentage of regulatory reserves plus a percentage of death strains.

Balance at 31 December 2013	4	3,576	16,322	1,989

14. Long term business provisions

The Company's liabilities are for contracts that provide individual immediate and bulk immediate and deferred annuities.

The immediate annuities are either fixed, where annuity payments are guaranteed from the outset, or inflation linked. These products provide guaranteed income for a specified time, usually the life of the policyholder, in exchange for a lump sum capital payment. No surrender value is available under any of these products.

The deferred annuities are also either fixed or inflation linked, both during deferment and in payment.

The primary risks to the Company are therefore mortality, investment and credit risk.

The Company's fixed-increase annuities may incorporate automatic increases in annuity payments by fixed amounts over the policyholder's life. The Company's inflation linked annuity contracts provide for a regular annuity payment which changes periodically based on the change in UK inflation, which:

- (i) for the majority of contracts is measured by the Retail Price Index (RPI) and
- (ii) for some contracts are subject to pre-defined minima and maxima.

For bulk annuity business, the Company manages the assets and accepts the liabilities of a company pension scheme, to the extent to which they are funded, usually when it is wound up by the employer.

Notes to the financial statements for the year ended 31 December 2013 (continued)

14. Long term business provisions (continued)

The provisions are the present value of the annuity payments and expenses. The calculation of the provisions requires a number of actuarial assumptions regarding future experience to be made. The assumptions are set by the Directors having regard to actuarial advice and based on analysis of relevant past and current data and information on anticipated future trends.

The key assumptions made at 31 December 2012 and 31 December 2013 are shown below.

Mortality

Mortality assumptions are set in light of recent population and internal experience. The mortality assumptions used are percentages of standard actuarial mortality tables. The percentages of the standard table used are selected according to the source of business. Where annuities have been sold on an enhanced basis to impaired lives an adjustment is made, either through an addition to the age or through an explicit mortality loading set by the underwriters.

The mortality assumptions also include an allowance for expected future improvements in longevity. For males, these future mortality improvements are in line with Prudential's own calibration of the CMI 2012 mortality model, with a long term improvement rate of 2.25% p.a. For females, the future mortality improvements are in line with Prudential's own calibration of the CMI 2012 mortality model, with a long term improvement rate of 1.5% p.a. Compared with the core CMI mortality model, Prudential's calibration:

- (a) blends period improvements between ages 60 to 80 to the long term improvement rate over a 15 year period (compared with a 20 year period in the core CMI model), and
- (b) assumes that cohort improvements dissipate over a 30 year period, or by age 90 if earlier (compared with a 40 year period, or by age 100 if earlier, in the core CMI model).

The assumptions used (shown as a range of percentages of base tables with future improvements), before any allowance for impairment, are set out below:

	2013		2012	
	Males	Females	Males	Females
In payment:	91% - 96%	84% - 98%	92% - 96%	84% - 97%

Notes to the financial statements for the year ended 31 December 2013 (continued)

14. Long term business provisions (continued)

Interest rate

The valuation interest rates comply with the requirements of Rule 1.2.33R of the Prudential Sourcebook for Insurers except that:

- additional margins for prudence required in setting the valuation interest rate for the valuation of liabilities for statutory solvency purposes have been removed;
- the Company is required, by an order issued under section 148 of the Financial Services and Markets Act 2000, to calculate the valuation rate of interest by reference to the aggregate yield on the assets rather than the market weighted gross redemption yield which is normally required by the Valuation Rules.

The valuation interest rates are adjusted to reflect investment management expenses and the risk of default on the assets.

The investment management expenses are reviewed annually and reflect the Company's costs.

The credit risk assumption is also reviewed annually and reflects the assets actually held. The assumption about the future level of defaults is 43 basis points per annum (42 basis points per annum at 31 December 2012), which is able to cover a significantly adverse credit situation.

Credit risk provisions

For IFRS reporting, the results are particularly sensitive to the allowances made for credit risk. The allowance is reflected in the deduction from the valuation rate of interest for discounting projected future annuity payments to policyholders that would have otherwise applied. Since mid-2007 there has been a significant increase in the actual and perceived credit risk associated with corporate bonds as reflected in the significant widening that has occurred in corporate bond spreads. Although bond spreads over swap rates have narrowed from their peak in March 2009, they are still high compared with the levels seen in the years immediately preceding the start of the dislocated markets in 2007. The allowance that should therefore be made for credit risk remains a particular area of judgement.

The additional yield received on corporate bonds relative to swaps can be broken down into the following constituent parts:

- (a) the expected level of future defaults;
- (b) the credit risk premium that is required to compensate for the potential volatility in default levels;
- (c) the liquidity premium that is required to compensate for the lower liquidity of corporate bonds relative to swaps; and
- (d) the mark-to-market risk premium that is required to compensate for the potential volatility in corporate bond spreads (and hence market values) at the time of sale.

The sum of (c) and (d) is often referred to as 'liquidity premium'.

The allowance for credit risk comprises:

- (i) an amount for long-term best estimate defaults and
- (ii) additional provisions for credit risk premium, downgrade resilience, and short-term defaults.

Notes to the financial statements for the year ended 31 December 2013 (continued)

14. Long term business provisions (continued)

Credit risk provisions (continued)

The weighted components of the bond spread over swap rates for fixed and linked annuity business at 31 December 2013 and 31 December 2012, based on the asset mix at the relevant balance sheet date are shown below.

	Adjustment from				
31 December 2013	Pillar 1 regulatory basis (bps)	regulatory to IFRS basis (bps)	IFRS (bps)		
Bond spread over swap rates note (i)	133	-	133		
Credit risk allowance Long-term expected defaults note (ii)	15	_	15		
Additional provisions note (iii)	47	(19)	28		
Total credit risk allowance	62	(19)	43		
Liquidity premium	71	19	90		

	Pillar I regulatory basis	Adjustment from regulatory to IFRS basis	IFRS
31 December 2012	(bps)	(bps)	(bps)
Bond spread over swap rates note (i)	161	-	161
Credit risk allowance			
Long-term expected defaults note (ii)	15	-	15
Additional provisions note (iii)	50	(23)	27
Total credit risk allowance	65	(23)	42
Liquidity premium	96	23	119

Notes

- (i) Bond spread over swap rates reflect market observed data.
- (ii) Long-term expected defaults are derived by applying Moody's data from 1970 to 2009 and the definition of the credit rating used is the second highest credit rating published by Moody's, Standard and Poor's and Fitch.
- (iii) Additional provisions comprise credit risk premium, which is derived from Moody's data from 1970 to 2009, an allowance for a 1 notch downgrade of the portfolio subject to credit risk, and an additional allowance for short-term defaults.

The very prudent Pillar 1 regulatory basis reflects the overriding objective of maintaining sufficient provisions and capital to ensure payments to policyholders can be made. The approach for IFRS aims to establish liabilities that are closer to 'best estimate'.

Notes to the financial statements for the year ended 31 December 2013 (continued)

14. Long term business provisions (continued)

Credit risk provisions (continued)

Movement in the credit risk allowance for the year ended 31 December 2013

The movement during 2013 of the average basis points allowance on Pillar 1 regulatory and IFRS bases are as follows:

	Pillar 1 Regulatory basis IFRS	
	(bps) Total	(bps) Total
Total allowance for credit risk at 31 December 2012	65	42
Credit rating changes	2	1
Asset trading	(3)	(2)
New business and other	(2)	2
Total allowance for credit risk at 31 December 2013	62	43

In 2010 and prior periods, surplus from favourable default experience was retained within short-term allowances for credit risk on both the Pillar 1 and IFRS bases. For full years 2011, 2012 and 2013 the retention of such surpluses continues to be applied under IFRS but not under Pillar 1.

Overall the movement has led to the credit allowance for Pillar 1 purposes to be 47% (2012: 40%) of the bond spread over swap rates. For IFRS purposes it represents 32% (2012: 26%) of the bond spread over swap rates.

The reserve for credit risk allowance at 31 December 2013 on a Pillar 1 regulatory basis was £1.7bn (2012: £1.9bn) and on an IFRS basis was £1.2bn (2012: £1.2bn).

Expenses

An allowance is made for expenses. This allowance is reviewed annually following an investigation into the Company's costs.

Other assumptions

A number of other, less financially significant, actuarial assumptions are made in calculating the provisions, including the likely marital status of joint-life policyholders on death and the future rates of escalation of certain benefits.

15. Debtors

Other Debtors	2013 £m	2012 £m
Amounts due from group undertakings	34	46
Due from Stockbrokers	1	
	35	46

Notes to the financial statements for the year ended 31 December 2013 (continued)

16. Provision for deferred tax

	2013 £m	2012 £m
Life tax transitional arrangements	219	279
Undiscounted provision for deferred tax	219	279
	2013 £m	2012 £m
Deferred tax liability at start of year	279	263
Deferred tax (credit) / charge in profit and loss account	(60)	16
Deferred tax liability at end of year	219	279

From April 2013, the standard corporation tax rate for the UK changed from 24% to 23%. Further reductions in the standard corporation tax rate to 21% from April 2014 and to 20% from April 2015 have also been enacted. Deferred tax at the end of 2013 has been provided wholly at the rate of 20% (2012 23%) on the basis that all of the temporary differences will reverse at the new rate. The effect of this change on the deferred tax liabilities at 31 December 2013 is £33m.

The UK Government has made substantial changes to the rules relating to the taxation of life insurance companies, effective from 1 January 2013. Until the end of 2012, shareholders' taxable profits are calculated using regulatory surplus as a starting point, with appropriate deferred tax adjustments for UK GAAP. Beginning in 2013, under new life tax rules, taxable profits are calculated using accounting profit or loss as a starting point.

At the end of 2012, a deferred tax liability was recognised for the transitional adjustment that arises from the difference in retained UK GAAP profits and taxed surplus which is required to be spread and taxed over a 10 year period.

The effect of these changes is reflected in the financial statements for the year ended 31 December 2013 but has no material impact on the Company's net assets.

17. Creditors

Other creditors including taxation and social security	2013 £m	2012 £m
Amounts owed to group undertakings	295	290
Taxation	68	44
Other creditors	108	48
	471	382

Included within amounts owed to group undertakings at 31 December 2013 was an amount of £213m (2012: £283m), which represents two contingent loans (including interest) repayable to The Prudential Assurance Company Limited. During the year a repayment of £Nil (2012: £Nil) was made as a prepayment in respect of these loans but £79m (2012: £Nil) is due to be repaid.

Notes to the financial statements for the year ended 31 December 2013 (continued)

17. Creditors (continued)

Loan repayments are contingent upon surplus arising and are made after the end of each financial year as a specified percentage of the lesser of the Company's Pillar I surplus and the Company's Pillar II surplus which emerged over that period. If either surplus arising amount is negative, no repayments need be made in respect of that financial year.

Any repayment obligations crystallise on the last day of the financial year to which the surplus arising relates. The loans may be prepaid by the Company upon prior notice.

All other creditors of £176m (2012: £92m) are payable within a period of five years.

18. Guarantees and Commitments

At present, the Company has not provided any guarantees or commitments to third parties that have been entered into in the normal course of business. From time to time the Company may enter into these arrangements, however the Director's do not consider the amounts to be significant.

19. Bank current accounts

Under the terms of the Company's arrangements with the Prudential Group's main UK banker (HSBC), the bank has a right of set-off between credit balances (other than those of long term business funds) and all overdrawn balances of those Group undertakings with similar arrangements.

20. Called up share capital

The total number of issued and fully paid shares at the year end was 837,700,000 (2012: 837,700,000) ordinary shares and 20,000,000 (2012: 20,000,000) preference shares.

The Preference Shares issued carry the right to receive a non-cumulative preferential Dividend which shall accrue at the rate of two pence per annum. The Preference Shares may not be redeemed otherwise than at the option of the Company at any time after the fifth anniversary of the date of issue of such Preference Share.

The Preference Shares carry no voting rights except if a resolution is proposed in relation to (i) the winding up of the Company, a voluntary arrangement with creditors of the Company or proposed receivership, administrative receivership or administration of the Company; or (ii) an alteration of the rights of the Preference Shares or in relation to any other matter which will have detrimental effect upon the rights of the Preference Shares.

21. Charges

In the normal course of business certain reinsurance liabilities were secured by a floating charge, ranking these liabilities equally with amounts due under unsecured direct (non-reassurance) policies, over the long term insurance assets of the Company. Amounts secured by charges of this nature were £7,638m and £446m (2012: £7,465m and £481m) representing individual liabilities to one customer.

Notes to the financial statements for the year ended 31 December 2013 (continued)

22. Related party transactions

The Company has taken advantage of the exemption under paragraph 3(c) of Financial Reporting Standard Number 8 from disclosing transactions with other subsidiary undertakings of the Prudential Group. There were no other transactions with related parties.

23. Immediate and ultimate parent company

The immediate parent company is The Prudential Assurance Company Limited. The ultimate parent company is Prudential plc, which is the only parent company which prepares group financial statements. Copies of these financial statements can be obtained from the Company Secretary, Laurence Pountney Hill, London, EC4R 0HH.
